Make IT Secure!

Dekart Management Tool

A corporate environment,
has different operating systems - we have solutions for them,
has different systems for remote access - we work with them,
has different vendors of key storage devices - we support them,
Dekart provides solutions to ease implementing your corporate security policy.

Dekart offers useful and reliable tools to enable you to lower the cost of securing your enterprise data and protect your existing investment.

Dekart Key Manager

dekart

Make IT Secure!

Dekart management tool:

- Provides single point of control
- Manages diverse hardware for multi-factor authentication
- Reduces total cost of ownership (TCO)

Corporate Profile

For over ten years, Dekart has been providing solutions to facilitate secure communication between individuals and businesses.

Employing state-of-the-art encryption algorithms, certified by the National Institute of Standards and Technology (AES and SHA-1 algorithm), Dekart offers cost-effective and reliable solutions to provide robust, enterprise-class security to store and transmit sensitive data. Designed to protect enterprise information, allowing customers to securely share data and automate sensitive processes, Dekart cross-platform security products significantly reduce costs and accelerate return on investment for organisations and individuals.

Dekart Key Manager - management tool for USB keys and smart cards, for administrators charged with the challenging task of managing hundreds, sometimes thousands, of USB keys and smart cards. Key Manager simplifies the process of management of multifactor security solutions within the enterprise. Key Manager allows you to browse the content of the memory of a USB key or smart card. It gives the administrator a clear view of all Dekart applications that store data on the key. Data can be moved from one key to another, edited and stored back on the key.

- Multi-vendor support
- Simplifies management of enterprise deployment
- Interprets memory

Dekart Key formatting utilities - prepare a USB key or smart card for use by Dekart products. Automatically determines the formatting required by different keys or smart cards (over twenty different devices can be recognized and formatted). Dekart Key Formatting Utilities can format up to 127 devices during a single session and allow you to share devices with applications from other vendors.

- Partial formatting of USB key or Smart Card
- Support for undo functions
- Vendor Friendly Application
- User Friendly and simple.

Dekart SIM Manager - management tool for GSM SIM card phonebook entries. It works with all SIM cards using any compatible PC/SC smart card reader. You can set up, transfer and change user data. Dekart SIM Manager has all necessary tools for exporting/importing address books, and enables you to use phonebooks and address books of other popular applications.

- Supports all languages
- Edits phone entries in the SIM card
- Backup and export/import
- PIN code management
- Compatibility with all GSM phones
- Supports all GSM SIM card types
